The Shape of Health

Session summary

Educational exploration only. This is not a diagnosis, a risk assessment or a substitute for professional medical care. For severe or sudden symptoms, seek urgent medical help.

Selected model inputs

Frequent sneezing, Runny nose, Cough, Congestion, Throat irritation, Loss of smell

Context

How long have you noticed these symptoms? 1-3 days

Ranked model matches

Model: health-rf-1.0.0. Rankings are dataset matches, not individual disease probabilities.

1. Common cold

The common cold is a viral infection of the upper respiratory tract.

Supporting selected symptoms: Congestion, Frequent sneezing, Cough, Loss of smell, Runny nose, Throat irritation

Largest SHAP contributions for this class (internal model-score units):

Loss of smell: +0.0933; selected

Congestion: +0.0674; selected

Throat irritation: +0.0483; selected

Runny nose: +0.0260; selected

Redness of eyes: -0.0077; not selected

Frequent sneezing: +0.0069; selected

Phlegm: -0.0061; not selected

Muscle pain: -0.0051; not selected

Only the largest contributions are listed; they do not sum to the full model output. Contributions describe model behavior, not medical causes.

MedlinePlus: Common cold | U.S. National Library of Medicine

https://medlineplus.gov/commoncold.html

2. Allergy

An allergy is an immune response to a substance that is usually harmless.

Supporting selected symptoms: Frequent sneezing

Largest SHAP contributions for this class (internal model-score units):

Frequent sneezing: +0.0443; selected

Watering from eyes: -0.0207; not selected

Cough: -0.0131; selected

Vomiting: +0.0088; not selected

Chills: -0.0077; not selected

Shivering: -0.0069; not selected

Congestion: -0.0067; selected

Itching: +0.0045; not selected

Only the largest contributions are listed; they do not sum to the full model output. Contributions describe model behavior, not medical causes.

MedlinePlus: Allergy | U.S. National Library of Medicine

https://medlineplus.gov/allergy.html

3. Asthma

Asthma affects the airways and can cause episodes of breathing difficulty.

Supporting selected symptoms: Cough

Largest SHAP contributions for this class (internal model-score units):

Cough: +0.0565; selected

Mucus in coughed-up phlegm: -0.0162; not selected

Shortness of breath: -0.0114; not selected

Loss of smell: -0.0104; selected

Family history: -0.0101; not selected

High fever: -0.0077; not selected

Vomiting: +0.0075; not selected

Chest pain: +0.0051; not selected

Only the largest contributions are listed; they do not sum to the full model output. Contributions describe model behavior, not medical causes.

MedlinePlus: Asthma | U.S. National Library of Medicine

https://medlineplus.gov/asthma.html

Model limitations

Educational model; not clinically validated and not a diagnosis.

The original dataset's clinical provenance, collection process and population are undocumented.

4,920 rows collapse to 304 distinct symptom patterns across 41 labels. Templates are highly repetitive.

Small internal holdout; results do not establish performance on real people or unseen conditions.

Only recorded symptom presence is modeled. Missing selections are encoded as absent; age, duration and lab values are not model inputs.

Ranked matches are model similarities, not personal disease probabilities. Some dataset labels describe symptoms or syndromes rather than diagnoses.

Report findings

Report values are kept separate from the symptom model. Verify all values against the original report. Reference ranges are copied, not medical interpretations.

fictional-text.pdf

Status: done

Hemoglobin: 14.1 g/dL; reference: 12.0-16.0; page 1; embedded_text; review required.

Glucose: 92 mg/dL; reference: 70-99; page 1; embedded_text; review still recommended.

Platelets: 250 10^3/uL; reference: 150-450; page 1; embedded_text; review still recommended.

TSH: not extracted ; reference: not extracted; page 1; embedded_text; review required.

Some fields are uncertain or missing. Correct them before exporting.

fictional-scanned.pdf

Status: done

Hemoglobin: 13.8 g/dL; reference: 12.0-16.0; page 1; ocr; review required.

Glucose: 92 mg/dL; reference: 70-99; page 1; ocr; review required.

Platelets: 250 ; reference: 150-450; page 1; ocr; review required.

TSH: not extracted ; reference: not extracted; page 1; ocr; review required.

Some fields are uncertain or missing. Correct them before exporting.

Privacy and provenance

This download was generated in your browser. Health inputs are held in application memory. Live inputs and reports are processed by the configured Python backend; they are never submitted to Gemini. The optional generative example endpoint accepts predefined fictional case IDs only. You control where you save or share this PDF.
